

THE GLQO WATERSHED JOURNAL

The Gull Lake Watershed includes Gull Lake, Little Long Lake, Grassy Lake, Little Gull Lake, Miller Lake, Bullhead Lake, Duck Lake, Backus Lake, Dake Lake, Elliston Lake, Mud Lake, Wintergreen Lake, and Prairieville Creek.

Remembering Fischer Jex

By Kay Gross, President

We are sad to share with GLQO members that Brandon “Fischer” Jex passed away in April, 2025. Fischer was the coordinator of the GLQO Boat Wash at Prairieville Township Park for the past three years, and his passion for natural resources allowed us to greatly expand GLQO outreach activities there. His nickname “Fischer” reflected his lifelong passion for woods, wildlife, and especially water.

Under Fischer’s direction, we added a “Wildlife Viewing” display to the boat wash that included information about native plants and animals found in and around Gull Lake. Kids delighted in going with him to nearby Prairieville Creek to sample what was there and to look at it under a magnifier or microscope. He also started a Facebook page “[The Wild Watershed of Gull Lake](#)”, where he posted information about the diversity of organisms he saw in and around Gull Lake.

Fischer also did a lot to raise awareness among boaters using the park about the risks of Aquatic Invasive Species (AIS), especially plants, to the water quality of Gull Lake. He encouraged his crew to greet every boater at the park and to explain to them the importance of boat washing to reduce the spread of AIS between lakes. He installed a large map of lakes and streams of Michigan at the boat wash shed and encouraged boaters to ‘pinpoint’ where they were from and other lakes they visited. Last summer, he arranged to have Gull Lake as part of a MDNR “Landing Blitz” that raises awareness about the need to use a boat wash to reduce the spread of AIS between lakes.

To honor Fischer’s passion for protecting our natural resources, particularly lakes and streams, in July, the GLQO will plant a native Serviceberry tree adjacent to the boat wash shed at Prairieville Township Park on Gull Lake. A Serviceberry is a fitting tribute to Fischer as its flowers provide food for pollinators, its fruits are edible and fed on by many bird species, and its foliage is beautiful throughout the summer and fall. Contributions toward the purchase and installation of this tree can be made through the GLQO website (<https://www.glqo.net>), or by mailing to GLQO at Box 144, Richland, MI 49083. Please note on your contribution that this is for the Fischer Jex Memorial.

Another Successful GLQO Annual Meeting

By Kay Gross, President

Over 60 GLQO and other community members gathered in the Terrace Room at the Kellogg Biological Station on Tuesday, June 10 for the GLQO annual meeting. It was a beautiful summer evening and several of those in attendance mingled out on the Terrace before and after the meeting. Guests were greeted with a slide show highlighting “what we do” prepared by Amber Widner, the GLQO Boat Wash coordinator this year. Amber made signs and recruited three of the Boat Wash Attendants to guide people to the meeting site.

The meeting began with President Kay Gross, thanking those in attendance, including Supervisors from Ross and Richland Townships. She also thanked the five local businesses (Hawks Hollow Builders, Compass and Cleaver, Gull Lake Ministries, Keller Williams Realty, and Berkshire Hathaway) who sponsored the meeting – their financial contributions covered the cost of the meeting. She introduced the GLQO Board members in attendance and thanked those who are retiring: Sera Gesmundo (co-chair Outreach), Don Paulson (Treasurer), Pete Hawk (Boating Safety) and Dustin Perrin (Boat Wash liaison).

A highlight of the meeting was a presentation by Cliff Bloom, an expert in riparian law, who discussed a number of legal issues that confront lake property owners. Many GLQO members were familiar with Bloom’s work as he writes a regular column for *The Michigan Riparian*, a quarterly publication of the Michigan Lakes and Streams Association (MLSA). The format of the talk allowed those in attendance to raise some issues of local concern. An overview of Mr. Bloom’s presentation, as well as Mr. Bloom’s PowerPoint slides, are available on the GLQO website and Facebook page.

Business conducted at the meeting included the confirmation of continuing and new board members for the GLQO. Continuing on the board for a second three-year term are: Andy Wider (Finance Committee), Jay Wesley (Fisheries Committee) and Tom Belco. New board members included Steve Keith (from Gull Lake Ministries), who has previously served on the Board, Hank Pender (owner of Pender Boat Works) and Jim Nolin (retired), who recently returned to his family home on Gull Lake. Their three-year terms on the board will begin at the September meeting.

Kay Gross, President of GLQO, also gave a brief overview of activities of GLQO over the past and coming year including a financial overview. Monitoring lake water quality (Gull Lake and Little Long Lake) and working to control the spread of aquatic invasive plants in Gull Lake are key activities of the GLQO, accounting for approximately 70% of our expenditures. Income to the GLQO comes primarily from dues (~80%) and while the number of Lifetime members has increased over the past five years (from 16 to 45), regular memberships have declined. To address this GLQO is planning to increase focus on outreach to attract new members and retain current members. Several suggestions came from the audience of ideas for how to do this. There will also be a slight increase in the base membership (Bronze level) beginning in 2026 (from \$40 to \$50). This is the first dues increase in over 10 years. Several handouts summarizing GLQO activities were provided to those in attendance, including a map showing details of the depth of Gull Lake and highlighting recommended distances for safe boating.

Attorney Cliff Bloom shares insights into Riparian Rights

Fifty Years of Monitoring Water Quality - CLMP

By Gary Mittelbach

What is CLMP, you ask? It's the Cooperative Lake Monitoring Program, a state-wide program which trains citizen volunteers to collect water quality data from Michigan lakes and share this information through a freely accessible database of over 100 lakes. This year marks the 50th anniversary of CLMP, making it the second oldest volunteer lake monitoring program in the country. The Gull Lake Quality Organization has been part of CLMP for 15 years, contributing data from Gull and Little Long lakes. How did this come about? It's an interesting story and one we wanted to share with you in celebration of the 50th anniversary of the CLMP program. We also want to share with you our recent water quality results from 2024.

MSU scientists at the Kellogg Biological Station have been sampling water quality in Gull Lake sporadically since the 1960s. Their data were very important in documenting a decline in Gull Lake water quality in the early 1970s and showing that phosphorus inputs from septic tanks were a major factor contributing to this decline. This information was instrumental in helping secure funding for the construction of the Gull Lake Sewer, a project spearheaded by the Gull Lake Quality Organization. Subsequent sampling by KBS scientists showed that after installation of the Gull Lake sewer, water quality improved dramatically. However, at the time there was no funding to support continued sampling of water quality in Gull Lake.

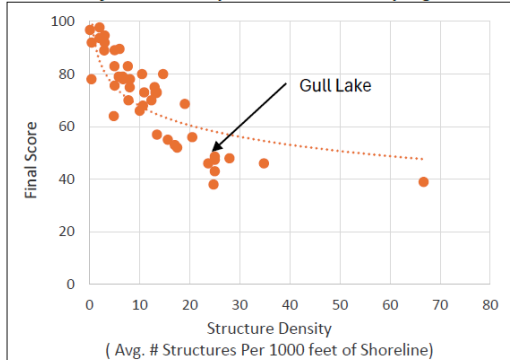

About 15 years ago, the GLQO Directors recognized the need to develop a more regular and systematic program of water quality assessment in Gull Lake, particularly with growing concern over the potential for increased nutrient inputs from agricultural runoff. To do this, in 2010 we enrolled in the CLMP program and recruited volunteers to do the sampling. Around this same time, the GLQO supported a KBS doctoral student (Jeff White) to collect water quality data for Gull and Little Long Lakes in conjunction with research on zebra mussels that had invaded both lakes. The data collected by GLQO volunteers over 3 years for the CLMP program agreed with that collected by Dr. White over this same time period, verifying that the CLMP programs would be a cost-effective and reliable way to develop a long-term record of water quality in Gull and Little Long lakes.

Volunteers with the GLQO have collected water quality data in Gull and Little Long lakes through the CLMP program now for 15 years. The results from 2024 were made available in early April 2025 and show that both lakes had excellent water quality in 2024 in terms of water clarity, oxygen levels and low nutrients. More importantly, there is no evidence of any significant changes in these measures over the past 15 years. All good news! You can find a full report of the 2024 data for Gull and Little Long lakes on the GLQO website (<https://www.glqo.net>).

The CLMP program also provides a way to assess the "health" of lake shorelines through their "Score the Shore" program. GLQO volunteers conducted a "Score the Shore" survey of Gull Lake in 2016. The survey showed that Gull Lake with its high density of homes, many boats and docks and highly developed shorelines scored rather poorly (see graph below). We have highlighted the results of this 2016 survey at a number of GLQO annual meetings as a way of encouraging Gull Lake riparians to do more to try to make their shorelines "healthier" by planting natural vegetation, not mowing right to the water's edge, by having sloped rather than vertical sea walls, etc. All of these practices have been shown to have a positive effect on lake water quality and to benefit fish, turtles, birds and other creatures that are important to the ecology of the lake. We've seen some Gull Lake homeowners adopt these practices and have provided information at our annual meetings to encourage more people to do this. Last summer, GLQO volunteers conducted a follow-up "Score the Shore" survey of Gull Lake to see if these efforts had improved our 'score'. Unfortunately, as the graph below shows, there was little change in the 'score' for Gull Lake (see 2024 results below). This was certainly disappointing and somewhat surprising to us. However, we continue to encourage our members and others to improve

their lakeshores and we are committed to helping people learn how to do this. See the notice below of our Summer, 2025 Natural Shoreline Workshop.

How does your lake compare to others in the program?

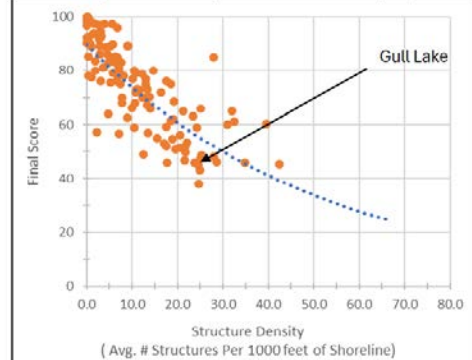

Analysis specific to Gull Lake:

Overall, the lakeshore habitat of Gull Lake is below average when compared to the other lakes in the program. The majority of the lake sections were scored as poor. (46 poor, 19 fair, 3 good).

2016 Results

How does your lake compare to others in the program?

Analysis specific to Gull Lake:

Overall, the lakeshore habitat of Gull Lake is below average when compared to the other lakes in the program with similar amount of development. The majority of the lake sections score Poor.

2024 Results

Natural Shoreline Workshop – July 10th (Sign up by July 8th!)

Prairieville Township Shoreline Enhancement Project is Underway!

By Amber Widner and Susan Harrison

This is a hands-on workshop where you will learn what you can do to improve the shoreline on your property to protect water quality... and enhance the natural beauty of your lake-front. The workshop will include a tour of different options, the opportunity to work with experts to develop a plan for your shoreline, and free native plants to get you started. And lunch!

Cost: \$25 for GLQO Members & \$50 for non-members

Sponsored by:

Gull Lake Quality Organization, Michigan State University Extension,
The Michigan Department of Environment, Great Lakes and Energy
(EGLE) & Kellogg Biological Station

More information: <https://events.anr.msu.edu/NaturalShorelineWorkshop/>

Thanks to the partnership between GLQO and Prairieville Township, the shoreline along Prairieville Creek in the Township Park on Gull Lake has been enhanced with the introduction of hundreds of beautiful native plants. This effort is part of GLQO's mission to illustrate the ecological benefits of creating native shorelines along our waterways. The introduction of native plants along the creek helps to stop erosion into the creek (and lake) and supports native insects and animals. An added bonus is that these plants add color and beauty to this area of the park.

The project is being aided by input and materials from Michigan DNR and EGLE, Barry Conservation District, Kalamazoo Wild Ones and the Kellogg Biological Station. After months of planning, the project 'broke ground' in early June with the planting of fifteen small Red Bud and Dogwoods trees and hundreds of flowering plants. The flowering plants were purchased from Barry Conservation District and provided to the project from a donation made to *Wild Ones* by Margo Rebar. These plantings include nodding wild onion, columbine, beards tongue, and swamp milkweed. In addition, members of the team contributed ostrich ferns, asters and marsh marigolds

from their home gardens to be planted along the creek edge. The planting team included Margo Rebar, Sue Harrison, Sue Markus and Amber Widner from GLQO, Judy Risdon from Prairieville Township, and additional help from boat-wash crew and park staff.

(For the complete, more detailed article on this Project, please check out the GLQO Facebook Page and Website).

A conversation with Dick Boris, long-time supporter of GLQO

By Ellen Keenan

I recently had the pleasure of having lunch with Richard (Dick) Boris, a long-time GLQO member and strong supporter of our organization. Over lunch I learned more about his nearly 50 years in real estate and his love for the Gull Lake area. Though retired for several years now, Dick remains passionate about the benefits of living on and around Gull Lake. While in business his motto was “Keep the Quality” and that applied to many aspects of his life!

Dick’s introduction to real estate came from his father who was involved in development of the west side of Kalamazoo. Dick remembers helping him name some of the streets in those neighborhoods! After graduating from WMU, Dick initially thought he would go to work for his Dad, but Dad had other ideas and encouraged him to start out with another broker, Arthur Early & Son. It was through this connection that Dick discovered his love for Gull Lake. Arthur invited his associates to his home on Gull Lake one summer afternoon and Dick was ‘smitten’. And this planted the seeds of focusing his business on the Gull Lake area.

After two years working for Arthur Early, Dick was invited to join his father’s firm. He quickly acquired his broker’s license as he found that selling homes was more fun than managing people. In 1976, he became a home-owner on Gull Lake and he has lived here ever since. Over his career, Dick has sold hundreds - perhaps thousands - of homes on Gull Lake. For many newcomers to the area, Dick Boris was their introduction to the beauty of Gull Lake and the joy of living here. He encouraged everyone who bought a home from him to join the Gull Lake Quality Organization (thank you, Dick!) and the Country Club. He said “if you live in an area you have to support it!” We agree!

In 1998, Dick purchased a small building in the south bay area of Gull Lake as the home of Dick Boris Realty. This little brown cottage has been a familiar site on the bay and for many people their first introduction to Gull Lake living. When Dick decided to retire, he wanted to sell his business to someone who would share his passion for Gull Lake; Jacqua Realtors, as

Dick Boris
Photo courtesy Ellen Keenan

another family-owned real estate business, fit the bill. Jacqua has continued to support our Organization by joining GLQO as a Business member.

Dick enjoyed his life as a realtor and now loves being retired and spending time with his family on Gull Lake. He continues his support for GLQO by being a Silver Member of GLQO and encourages his friends to do the same!

2025 Members

We aim to keep our membership lists accurate; those listed here are members as of June 20th, 2025.
